PROFILE

Technical product manager bridging AI/ML engineering and business strategy. Experienced translating complex data systems into user-facing products and measurable outcomes across national lab and startup environments.

EDUCATION

Georgia Institute of Technology — Online
Masters of Science, Computer Science — *Expected Aug 2026*

Cornell University, Product Management Certificate — *May 2026*
Covered product hypothesis, personas, roadmapping, prototyping, analytics, and go-to-market execution

Pace University, Seidenberg School of Computer Science and Information Systems — New York, NY
Bachelor of Arts, Computer Science | Minor: Business | Dean's List |GPA: 3.81 — *May 2026*

- **Honors Thesis**: Digital Pollution: Understanding Energy Costs of Large Language Models

TECHNICAL SKILLS

Product: Roadmapping, user research, experiment design, metrics definition, Agile, Scrum, SDLC Data & AI: Python, SQL, R; Scikit-learn, Pandas, NumPy; ML Pipelines, model evaluation, Tableau, Matplotlib Tools: AWS, Git, GitHub, Jupyter, React, APIs

PROFESSIONAL EXPERIENCE

Python & AI Instructor — Stanford, CA
iD Tech at Stanford University — *Expected Jun – Aug 2026*

Engineering Intern — Stanford, CA
Stanford Synchrotron Radiation Lightsource (SSRL) — *Jun 2025 – Aug 2025*

- Designed ML-based peak scanning and automated phase detection to improve experiment efficiency across high-temperature diffraction cycles, reducing manual analysis time across X-ray diffraction datasets.

Product Ambassador & Software Contributor — New York, NY
marimo.io — *Sep 2024 – Dec 2024*

- Built interactive Python notebooks to validate product workflows and explain model behavior to users
- Collaborated with engineers to incorporate user feedback into product improvements and UX refinements
- Authored technical tutorials that increased adoption and clarity for research teams

Data Science Intern & Software Developer — Stanford, CA
SLAC National Accelerator Laboratory, U.S. Dept. of Energy — *Mar 2023 – Aug 2024*

- Analyzed 60+ photovoltaic datasets using Python, Pandas, and ML techniques; integrated NOAA + NREL data into automated pipelines for multi-state climate modeling
- Built visualizations and geospatial tools to support renewable grid resilience research

PROJECTS & RESEARCH

Skill Sync — React, Scrum — Software Engineering Capstone — *2026*

- Built full-stack barter platform in a team of 4 using React and Firebase; led sprint planning, implemented client-side routing, and developed REST API endpoints for user matching logic

Extreme Weather + Solar Performance Modeling — Python — *2024*

- Merged NOAA + NREL dataset to model regional grid stress and visualize solar performance losses during heatwaves

LEADERSHIP

President - Institute of Operations Research and Management Sciences — *Feb 2023 – Dec 2025*

- Built peer analytics community teaching Python, SQL, and data analysis to 300+ students
- Organized 14 workshops and speaker events with NYC tech professionals.

Marketing Lead, Google Developer Groups on Campus — *Jul 2025 – Present*

- Grew workshop attendance 200% through targeted outreach and engagement.

AWARDS

IBM 1st Place Agentic AI Hackathon | NSF Supercomputing Fellow | NVIDIA Deep Learning Certificate | Pforzheimer Honors Scholar
United Nations Millenium Fellow
